This patent teaches a device for monitoring the hydrogen concentration in a medium which comprises hydrogen-sensitive sensors (S1-S8) in contact with the medium. It is connected to an evaluation unit (1) which is connected to an alarm (12) to trigger an alarm signal when the maximum permissible hydrogen concentration in the medium is reached. The evaluation unit has two separate sensor channels (2, 3). In one of the channels, at least one of the sensors is connected to a cascading sensor chain. Preferably, the sensor chain consists of two digital sensors electrically connected in parallel.
